

STAY CYBER SAFE AT UWA

A quick guide for students - 6 habits that protect everything else.

1

Use a Password Manager

Stop reusing passwords. Bitwarden is free for students.
One strong master password, the manager handles the rest.
Generates unique 20-character passwords for everything.

2

Turn On Two-Factor Auth

Enable 2FA on PHEME, Microsoft 365, email, banking, etc.
Even if your password leaks, attackers cannot log in.
Prefer authenticator apps over SMS where possible.

3

Pause Before You Click

UWA students get phished for scholarships, IT support, etc.
Check the sender domain. Hover over links to see the real URL.
When in doubt, log in to the real site in a new tab.

4

Be Wary on Public Wi-Fi

Cafe / library Wi-Fi can be sniffed by anyone nearby.
Avoid logging in to banking or sensitive accounts.
Use a VPN (Cloudflare WARP is free) or your phone's hotspot.

5

Update Everything Weekly

OS, browser, and apps. Most attacks exploit known vulnerabilities.
Schedule one 10-minute Sunday-evening update session.
Auto-update is fine -- leave it on.

6

Lock Your Devices

Laptop in the library = thief in your inbox in under 60 seconds.
Set a screen lock under 5 minutes. PIN > pattern.
Enable Find My Device / Find My Mac so you can wipe the device.

Been hacked? Lost your phone? Got a weird email?

Don't wait. Email askit@uwa.edu.au immediately. UWA IT has a dedicated incident response process.
